

Vori

The OS for Grocery

Order management

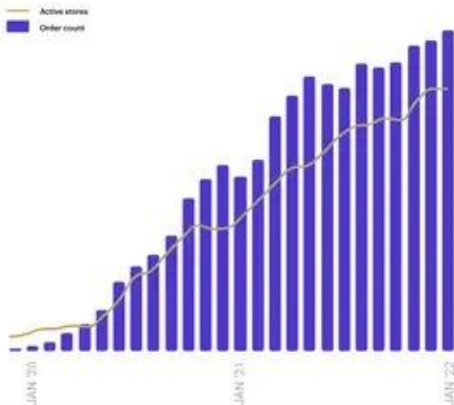

Inventory management

Analytics

Vori is a vertical SaaS solution for local
and regional supermarket chains

Vori at-a-glance

- **Hundreds of active stores. 57% Q/Q growth**
- **Deep integration with dozens of paid customers**
- **Thousands of stores on the waiting list**

**We
understand
grocery**

CEO's parents

40 years of grocery experience

Our market: Independent Grocery Chains

- \$250B independent grocer market
- 30,000 locations across USA
- 33% of U.S. marketshare
- Fastest growing sub-category of brick & mortar supermarkets

Grocery stores still run on pencil and paper

1. Grocery stores require lots of labor to run a low margin business
2. This human labor makes mistakes which causes products to be sold for less than they cost
3. Workers lack supply chain data which results in costly out of stocks and food waste
4. Grocers are already **paying billions for software a year**, yet still have problems 1-3

Q2 LAUNCH

What retailers are saying

BERKELEY BOWL MARKETPLACE

John Fukumoto
Director of IT

To continue to innovate at Berkeley Bowl, it was necessary to consider a back-office solution that brings together the POS lifecycle including ordering, receiving, inventory, and invoicing especially for our direct vendors. A flexible and highly customizable solution was necessary which distinguishes the Vori solution from any other solution on the market today.

The largest undigitized retail segment on earth

\$11.7T total spend

Global Grocery Stores

\$765B total spend

U.S. All Grocery Stores

\$250B total spend

U.S. Independent Supermarkets

fast growing

↑ 25% - 33%
of marketshare
in last decade

Competing against legacy systems
