

The Operating System for Identity

Series B | August 2020

Operating system for identity

the missing "core" system in fintech

Digital financial services is taking off

Identity issues hold innovation back

Identity Challenges

FIs face complex identity questions

Identity Resolution

Is this a real person?

Verification

Is this actually that person?

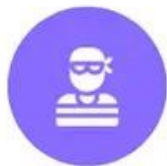

Fraud Prevention

Will they defraud us?

Underwriting

Are they a financial fit?

AML

Are they a terrorist or criminal?

Consequences

Lost Customers

Declining a good customer
= \$1,000s in lost LTV

Fraud Exposure

Approving a fraudulent customer
= \$10,000s in Fraud Exposure

Compliance

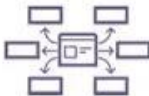

Lack of controls & transparency
= Huge fines (or worse)

Current solutions

Manually driven

50% decisioned manually

Multiple systems

To manage the end-to-end workflow

Static

Systems complexity + compliance

Bottom Line: The customer loses and growth stalls

50%

Customers lost to manual reviews or false positives

Can't grow without sacrificing compliance or fraud

Alloy

a bank-grade identity core

An End-To-End System For Identity

Onboarding Decisions

One unified identity system for:

Continues throughout the
customer lifecycle

Continuous Updates

to the identity profile as the customer

Unifying KYC elements reduces false positives

Name

Andrew Layne Martin

- ✓ ID Analytics ID Network Attributes
- ✓ Lexis Nexis Instant ID
- ✓ Socure 25

Address

152 PROSPECT ST
SOUTH ORANGE, NJ 07079-1835 US

- ✓ Lexis Nexis Instant ID
- ✓ Socure 25
- ✗ ID Analytics ID Network Attributes
- ✗ White Pages Pro

Running multiple data providers simultaneously means that Andrew's address can be considered verified if it hits in *any* service in the workflow, reducing needless document requests.

Linear

SSN

Credit

Device

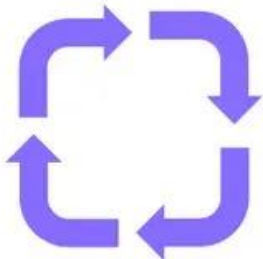

... etc.

Linear, sequential evaluation **amplifies** error from many noisy signals.

vs

Holistic Evaluations

Simultaneous evaluation in an orchestration layer **reduces error** from noisy signals.

The Key is Broad Data, Jointly Considered

Aggregating signals provides enormous improvements over any individual service used in isolation.

Service	Fraud Detected	False Positive
Traditional Credit	37%	10%
Phone/Device Analytics	6%	1%
Non-traditional/Social	58%	5%
Email History & Analytics	61%	8%
Classical KYC	23%	2%
Velocity / Consortium Data	64%	7.5%
Combined / Aggregated	90%	2%

Alloy is the linchpin of the future of financial services

Identity is the backbone of financial services and only Alloy can orchestrate identity properly.
